## PCS Digital Modem

PDM-3000

**The PDM-3000 Digital Modem** replaces the telephone line modem where a land-line is not available. The PDM-3000 uses nationwide PCS wireless communication networks for sending and receiving data via packet switched connections. The PDM-3000 is available in CDMA 1xRTT and GSM versions.

In remote settings or difficult-to-access sites, acquiring and responding to process control and alarm data can be challenging and costly. The PDM-3000 provides a real-time, low cost, bi-directional data communication solution for applications in remote locations where telephone service is not available.
